

Bootcamp_1

Modify the code in the Vehicle Information System to satisfy the following requirements

1. Vehicle Class should be Abstract.
2. Vehicle class implements the interface Comparable but leave the method compareTo as abstract
3. All other classes will be concrete and will be giving implementation for compareTo using **horsePower** to compare the Vehicles.
4. Create a Main class which creates an Array of objects of Vehicle type **vehObjArray**. For each type of vehicle create and add two objects. Bike, Car and Truck.
5. Sort the **vehObjArray** using horsepower.
